

# NOTE ON THE GREEK ECONOMY

### March 21, 2025

Economic Analysis and Research Department

**Recent Economic Developments: an overview** 

**Economic activity** continued to expand at a satisfactory pace in 2024 (2.3%), outperforming the euro area average. **HICP inflation** came down fast from its 2022 peak due to falling energy prices in 2023, but it remained relatively elevated at 3.0% in 2024 due to persistent services inflation. In February 2025, HICP inflation decelerated to 3.0% due to declines in the inflation rates of energy, services and unprocessed food. In the **housing market**, apartment prices continued rising at a strong, though decelerating pace in the course of 2024. **Labour market developments** remained positive in 2024, with employment rising and unemployment falling further. The **current account deficit** narrowed significantly in 2023, but deteriorated in 2024 (by  $\in$ 1.2 bn y-o-y). The 2023 **primary fiscal outcome** came in at a surplus of 2.1% of GDP, significantly larger than the 1.1% target, due to higher tax revenue as well as lower primary spending. The **debt to GDP ratio** decreased by 13.1 pp compared to 2022 to 163.9% of GDP on account of economic growth and elevated inflation. **Corporate bank credit expansion** accelerated significantly in 2024 but the growth of **household deposits** decelerated. **Bank lending rates** have been on a declining path since mid-2023. **Government bond yields and spreads** have retreated as the impact of higher interest rates was tempered by Greece's sovereign credit rating upgrades to the Investment Grade.

**Looking ahead,** according to the latest BoG projections in the context of March 2025 Eurosystem staff projections, the Greek economy is expected to grow by 2.3% in 2025, and converge thereafter towards potential growth. Growth will be mainly driven by private consumption and investment supported by available European resources. Inflation is expected to further decelerate in 2025. The fiscal stance in 2024 is assessed to have been mildly contractionary and it is expected to turn expansionary in 2025 and 2026 on the back of RRF implementation. **The risks** surrounding the growth projections are mainly downward and primarily related to climate change and elevated global policy uncertainty that could lead to lower world trade and investment, amid fears of new protectionist policies.

### Latest economic information - available in the last three weeks

#### **Economic Activity**

According to ELSTAT 1<sup>st</sup> estimate, **real GDP** rose by 2.3% in 2024, as in 2023, mainly due to an increase in private consumption, gross fixed capital formation and exports of services.

**Real GDP** increased by 2.6% y-o-y in 2024:Q4 (at constant 2020 prices, sa data), at a stronger pace compared to 2024:Q3 (2.3% y-o-y) mainly due to higher growth in gross fixed capital formation and exports of goods and services.

**Industrial production** increased by 2.0% y-o-y in January 2025, mostly due to the rise in manufacturing and electricity production (1.4% and 4.3% y-o-y, respectively).

The turnover of enterprises increased by 7.4% y-o-y in January 2025, due to a broad-based rise across sectors,

with the highest rise in turnover registered in the "electricity supply" sector.

#### Prices

**HICP inflation** decelerated to 3.0% in February, from 3.1% in January 2025, because of slower increases in the inflation rates of energy, unprocessed food and services, which overcompensated for the increase in the inflation rate of processed food.

In the **housing market**, apartment prices have continued to increase at a decelerating pace in 2024 (8.7% from 13.9% in 2023).

#### Labour market

**Total employment** increased by 2.3% y-o-y in 2024:Q4 (compared to an increase of 1.2% y-o-y in 2023:Q4) mainly due to employment growth in the construction, trade and tourism sectors. The unemployment rate decreased to 9.5% in 2024:Q4, down by 1.0 pp compared to 2023:Q4.

**Dependent employment net flows** in the private sector were negative by 15,540 jobs in January 2025 due to dismissals in restaurants and retail trade.

#### **Fiscal developments**

In January-February 2025, **the state budget primary outcome** came in at a surplus of 1.1% of GDP, against a surplus of 1.4% of GDP in January-February 2024. Compared to the annual target (according to the 2025 Budget), the primary balance over-performed by €0.7 bn due to higher revenue as well as lower primary expenditure.

In January 2025, **the general government cash primary outcome** came in at a surplus of 0.6% of GDP, against a surplus of 0.9% of GDP in January 2024, mainly due lower public investment revenue and RRF receipts.

#### **Money and Credit**

In January 2025, **bank lending rates** declined for corporate loans, but rose for housing loans to households (to stand at 4.70% and 3.78%, respectively).

#### Financial market developments

The Hellenic Republic tapped successfully the international bond market, for a total of  $\in 3.5$  bn, by reopening two GGBs issuances, with maturities of 15 years ( $\leq 2$  bn at 4.057%) and 30-years ( $\leq 1.5$  bn at 4.408%); investor bids reached 16 times the amount asked.

Morningstar-DBRS upgraded the sovereign credit rating it assigns to Greece by one notch to 'BBB' (with a stable outlook), citing as the main driver the continued improvement in bank fundamentals and fiscal overperformance.

**Moody's upgraded the sovereign credit rating it assigns to Greece to the investment grade** (to Baa3 from Ba1, with a stable outlook). The move reflects the agency's view that the sovereign has built up greater resilience to potential future shocks on the basis of improved public finances and a healthier banking sector.

Yields on medium- to long-run Greek government bonds rose significantly, in line with yields of other euro area sovereign bonds, after news that Germany and other European countries will boost defence spending. Greek equity prices rose overall, as did prices in European bourses. Greek corporate bond yields rose but significantly less than yields on euro area lower-rated corporate bonds, benefiting from the positive news on the ratings concerning the sovereign and Greek banks.

#### **Banks**

**Moody's upgraded Greek banks**: NBG's and Eurobank's long-term deposit ratings rose by one notch (to Baa1, with a stable outlook), as did those of Alpha Bank and Piraeus (to Baa2); Attica Bank's long-term deposit rating was upgraded by two notches to Ba2, maintaining a positive outlook. The sovereign rating upgrade to investment grade contributed to this development.

**Morningstar-DBRS** raised the long-term deposit ratings of NBG and Eurobank by one notch to 'BBB' (both with a stable outlook), after assigning the Greek sovereign a 'BBB' status.

As a result of the rating upgrades, yields on Greek bank bonds rose less than other EA bank bond yields.

### SUMMARY OF ECONOMIC DEVELOPMENTS AND OUTLOOK

#### **Economic Activity**

**Real GDP** rose by 2.3% in 2024, as in 2023, mainly due to an increase in private consumption, gross fixed capital formation and exports of services.

**Economic activity** continued growing in 2024:Q4, at a stronger pace compared to 2024:Q3 mainly due to higher growth in gross fixed capital formation and exports of goods and services.

**Soft data** (PMI, ESI) point to a continuation of growth standing at high levels in January and February 2025 and remaining above euro area average.

**Hard data** are overall positive. Most indicators continue to move in positive territory (industrial production, construction, tourism, employment). Weaker growth of goods exports along with accelerating growth rates of imports are among the main weaknesses currently.

#### Prices and real estate market

**HICP inflation** came down fast from its 2022 peak owing to falling energy prices in 2023. In 2024, the disinflation process weakened with HICP and core inflation (HICP excluding energy and food) standing at 3.0% and 3.6%, respectively, mainly due to persistent increases in services prices. HICP inflation decelerated to 3.0% in February 2025 from 3.1% in January, because of declines in the inflation rates of energy, services and unprocessed food.

The positive trend of **real estate prices** of 2023 continued into 2024, especially in the residential market. In 2024, apartment prices continued to increase at a strong, though decelerating, rate (8.7%). In 2024:H1 prime office prices increased by 4.2% y-o-y, while prime retail prices increased by 7.8% y-o-y.

#### Labour market and costs

**Total employment** growth remained positive in 2024:Q4 largely due to higher demand for labour in the tourist, construction, trade and professional services sectors. **The unemployment rate** in 2024:Q4 decreased by 1.0 percentage point compared to 2023:Q4. LFS monthly data for January 2025 show an increase in employment growth, while the unemployment rate (sa) decreased compared to the previous month.

**Net flows of dependent employment** in the private sector were positive but much lower in 2024 compared to 2023. In January 2025, net flows were negative by 15,540 jobs due to dismissals in restaurants and retail trade.

#### **External Balances, Competitiveness**

The **current account deficit** widened in 2024, compared to 2023, due to a deterioration in the balance of goods and, to a lesser extent, in the primary income account, which was partly offset by an improvement mainly in the balance of services but also in the secondary income account.

The nominal effective exchange rate continued to appreciate further in 2024:Q4. Nevertheless, the unit labour cost competitiveness indicator deteriorated in the first three quarters of 2024 due to wage increases. The price competitiveness indicator posted a small improvement in 2024:Q4 as price differentials remained favourable for Greece.

#### **Fiscal developments**

The 2023 **general government primary outcome** recorded a surplus of 2.1% of GDP against a balanced primary outcome in 2022. The **debt to GDP ratio** decreased to 163.9% in 2023 from 177.0% of GDP in 2022 (lowest since 2010) due primarily to the denominator effect (higher nominal GDP).

Both indicators are expected to further improve in 2024 primarily on the back of economic growth.

In the 2<sup>nd</sup> EDP notification (22.10.2024), a methodological change as regards the statistical recording of deferred interest on EFSF loans increasing the face value of general government gross debt was implemented for the period 2013-2023, following <u>Eurostat's advice</u>. However, the statistical treatment of deferred interest does not affect the public debt sustainability.

#### **Money and Credit**

During 2024, the growth rate of **household deposits** decelerated as the interest rate on bank deposits remained significantly below the return on alternative financial assets.

**Corporate bank credit growth** strengthened considerably during 2024 consistent with underlying economic growth and declining interest rates. **Bank loans to households** continue to decline due to net repayment of outstanding housing loans. However, the dynamics of housing loans continue becoming less negative.

**Bank lending rates** have started to decline since mid-2023 initially as a result of expectations for ECB policy rate cuts and then in line with the implementation of ECB policy rate cuts.

#### **Financial markets**

**The developments in Greek sovereign and bank ratings are positive**, with further rating upgrades in 2024 and 2025 to date. This stems from the sustained overperformance of the Greek economy in the fiscal and economic activity fronts, which fosters the prospect of further rating upgrades.

**Greek government bond yields** overall rose somewhat in 2024, following the broader euro area developments. Greek government bond yields follow a rising trend since 2024:Q4, in line with developments in euro area sovereign bond yields.

**Greek shares** posted a strong positive return in 2024, supported by the favourable growth prospects of the economy.

f:forecasts

Latest BoG projections

Over 2025-2026, the Greek economy is projected to grow by 2.3% and 2.1% correspondingly, recording a significantly higher growth rate compared to the euro area. The main drivers of economic activity will continue to be investment spending, also thanks to the contribution of European funds, and private consumption benefiting from the strengthening of real disposable income due to continued employment growth, wage growth amid a still tight labour market and minimum wage increases, as well as lower inflation.

Furthermore, the expected reduction in the public debt-to-GDP ratio (below 150% of GDP) in 2025, alongside the achievement of primary fiscal surpluses, is estimated to lead to a further improvement of the investment climate and to further sovereign credit rating upgrades.

Total exports of goods and services are expected to continue to grow on average by 3.5% over 2025-2026. However, the contribution of the external sector to GDP will be broadly neutral on average in the coming years, due to the strong investment activity that is expected to increase imports.

For 2027, the end of the RRF grant component will affect government investment growth negatively. However, the economy is projected to grow by 2.0%, supported by private consumption and export growth.

HICP inflation will decline significantly over the next two years. By the end of 2026, inflation will converge towards the 2% mark but will remain slightly above it. However, in 2027 a one-off uptick in HICP inflation to 2.5% is expected due to the impact of ETS2 on the energy component. Core inflation is expected to decline to 2.2% by 2027, reflecting mainly the decline in non-energy industrial goods inflation and to a lesser extent services inflation.

The risks surrounding the growth projections are mainly downward and related to: (a) a worsening of the economic climate in the eurozone and in the rest of the world, (b) a rise in protectionism and geopolitical struggles, (c) a lower than expected rate of absorption and utilisation of the Recovery and Resilience Facility funds, (d) natural disasters linked to the effects of the climate crisis, (e) intensifying tightness in the labour market and (f) a delay in implementing reforms that would slow down the process of enhancing the competitiveness of firms. A positive risk relates to stronger than expected tourist revenues.

#### Supportive EU and ECB policies and measures

Over the period 2021-2027, Greece is entitled to receive more than €70 bn of **EU funds**. About half of these funds (€36 bn) are related to the EU Recovery Plan (NGEU). The rest is structural funds from the EU budget 2021-2027.

NGEU funds are targeted at growth-enhancing high value-added projects in the areas of energy saving,

the transition to green energy, the digital transformation of the public and the private sector, employment, social cohesion, and private investment.

According to BoG estimates, full execution of the **EU Recovery Plan** will contribute to a significant increase of 7% in real GDP by 2026, primarily due to the increase in total investment and total factor productivity. At the same time, it will contribute to the increase of employment, private investment, exports and tax revenue.

The implementation of the reforms associated with the NGEU is projected to bring about a permanent increase of real GDP and total factor productivity (in the course of ten years).

#### **Key Challenges**

#### Short-term economic policy challenges:

- Controlling inflation.
- Accelerating investment, in part by mobilizing available European resources.
- Addressing emerging labour market shortages and skills mismatch.
- Designing climate adaptation strategies and disaster preventive measures.
- Ensuring energy security through investment in clean energy.
- Maintaining fiscal sustainability.
- Efficiently managing non-performing loans.

#### Medium to long-term economic policy challenges:

- Maintaining primary surpluses over an extended horizon to ensure public debt sustainability.
- Implementing structural reforms to support long-term growth.
- Addressing the current account deficit through the strengthening of the Greek economy's competitiveness.
- Stepping up the pace of the privatisation and reforms programme and continuing to improve the management of state assets in order to attract foreign direct investment.
- Promoting innovation, education and knowledge-based capital.

\* Savings of households and non-financial companies, as a % of GDP, four-quarter moving sum data.

Source: ELSTAT, national accounts.

# Economic activity continued growing in 2024 supported by private consumption, gross fixed capital formation and exports of services.

**Real GDP** rose in 2024:Q4, at a stronger pace compared to 2024:Q3 mainly due to higher growth in gross fixed capital formation and exports of goods and services.

**Gross fixed capital formation** increased (y-o-y) at an accelerating rate in 2024:Q4 due to the rise in housing and other construction investment (29.1% y-o-y and 11.8% y-o-y, respectively) in ICT investment (8.0% y-o-y) and in machinery and equipment investment (6.4% y-o-y). This development is likely related to the acceleration in RRF disbursements in 2024:Q4.

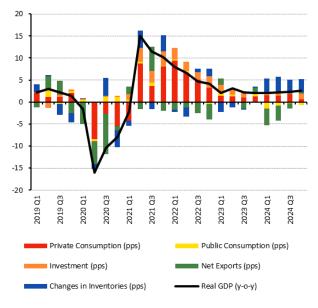

**Output** (as measured by gross value added) increased in 2024:Q4 due to the good performance across all sectors of economic activity, and in particular in the industrial and the services sectors.

Savings of the non-financial private sector (4-quarter moving sum) continued their downward trend reaching 6.9% of GDP in 2024:Q3 down from 8.0% in 2023 and 8.4% in 2022. Households' dissaving stood at -1.1% of GDP in 2024:Q3, while savings by non-financial corporations (NFCs) decreased to 8.0% in the same period. Notably, in 2024:Q3, household as well as business savings remained slightly above the 2019 pre-pandemic levels.

In 2024:Q3, the **household savings** became slightly less negative (-1.1% of GDP) compared to 2024:Q2 (-1.3%), as the growth rate of disposable income was stronger than that of consumption. The withdrawal of COVID-19 and energy support measures, and the repayment of debt and tax liabilities, have significantly weighed on household savings keeping them in a negative territory. **Business savings** (retained earnings) declined gradually, following a peak in 2022 (10.6% of GDP to 8.9% in 2023 and 8.0% in 2024:Q3). This trend reflects several factors, including the withdrawal of government support measures for the pandemic and energy crises and rising labour costs. Nevertheless, in recent years, the strong performance of the tourism sector and the economy overall has helped offset the slowdown in business savings, along with disbursements from the Recovery and Resilience Facility (RRF).

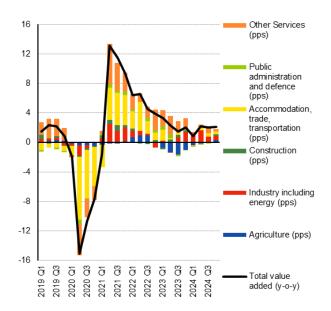

Nominal **disposable income of households increased** by 7.3% y-o-y in 2024:Q3 due to the positive contribution of labour income, i.e. compensation of employees and self-employed income, while real disposable income of households rose by less, up by 3.0% y-o-y, reflecting the effect of elevated inflation.

# Soft data point to a continuation of growth, standing at high levels in January and February 2025 and remaining above euro area average.

The **ESI** declined in February (to 106.9, from 108.6 in January) due to a deterioration in business expectations across all sectors; by contrast, consumer confidence improved for the fifth consecutive month, albeit still remaining at low levels.

The **PMI** posted 52.6 in February 2025 (marginally down from 52.8 in January) pointing to continued growth in Greek manufacturing for the last two years. Manufacturing output increased at a steeper pace compared to the previous month despite slower growth in domestic new orders, while new export orders

continued rising at a modest pace. Employment increased at the quickest pace since May 2024 due to increased production requirements. On the prices front, cost burdens rose sharply, while output prices rose at a slower pace m-o-m as some companies sought to price more competitively and boost new sales.

#### Hard data are overall positive.

**A recovery of the industrial sector** has been underway since November 2020. Industrial production continued rising in 2024 and in January 2025, mainly due to the increase in manufacturing and electricity production.

The rise in manufacturing production in January can be mostly attributed to the performance of the "food and beverages", "basic metals", "rubber and plastics" and "machinery and equipment" sectors.

The turnover of enterprises of the economy as a whole, which are obliged to keep double-entry accounting, increased in January 2025, in year on year terms, due to a broad-based rise across sectors, with the highest rise registered in the "electricity, gas, steam and air conditioning supply" sector (26.4% y-o-y).

**The volume of building permits** declined in November 2024, but remained on a positive path in the January-November 2024 period suggesting rising building activity.

**VAT revenues at constant prices,** which is an encompassing indicator for private consumption (it includes retail sales, car sales and services consumption), continued to increase strongly in the last quarter of 2024 and in January 2025 pointing to ongoing strong consumption growth.

The retail sales volume index declined in December due to a fall across all its sub-indices and remained on a negative territory in 2024 as a whole.

**New private passenger car registrations** following an increase in 2024, declined in the first two months of 2025, in year on year terms.

**Both tourist arrivals and receipts** set a historical record in 2024, as tourism maintained its momentum through winter, with December 2024 showing a significant double-digit growth in revenue (33.3%). More specifically, inbound traveller flows reached 35.9 mn in 2024, representing an increase of 9.8% compared to 32.7 mn arrivals recorded in 2023. Travel receipts in 2024 stood at €21.7 bn (a rise of 5.4% compared to 2023), despite a decrease in the average spending per trip. Germany and the UK remained the key tourist revenue sources. Among non-European markets, US visitor spending surged by 15.1%, continuing the upward trend recorded in all the years following the pandemic. According to Eurostat, Greece secured the 5<sup>th</sup> place among EU countries with the highest number of overnight stays across all types of tourist accommodations, a 3.5% increase in 2024 compared to 2023, outperforming the European average. Despite recent seismic activity, Santorini is steadily returning to normal and preparing for the upcoming tourist season, which will be further supported by the newly established Destination Management and Marketing Organization.<sup>1</sup>

**International arrivals at Greek airports** showed a 8.4% y-o-y increase in the first two months of 2025, while international arrivals at the Athens International Airport continued the positive momentum in February 2025, showing an increase of 12% y-o-y, even before the start of the tourist season.

<sup>&</sup>lt;sup>1</sup> The Destination Management and Marketing Organization is established to promote Santorini as an attractive tourist destination, raising funds of 1 mn euros from the Recovery and Resilience Fund.

Source: ELSTAT and Bank of Greece computations.

HICP headline inflation remained at elevated levels in 2024 mainly due to persistent services inflation. On average, in 2024, headline inflation for Greece (3.0%) was above euro area inflation (2.4%) and ranked as the fifth highest among euro area countries.

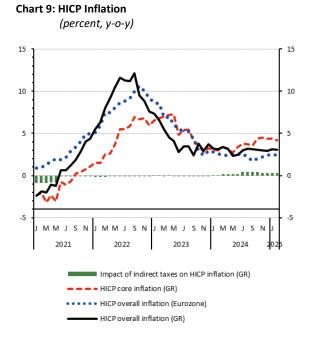

**HICP headline inflation** stood at 3.0% in 2024 compared to 4.2% in 2023. In February 2025, it ticked down to 3.0% from 3.1% in January 2025 because of declines in the inflation rates of energy, services and unprocessed food, which were partly offset by the increase in the annual rate of processed food. Greece reported the 9th highest headline inflation among euro area countries in February 2025.

**Core inflation** (HICP excluding energy and food) stood at 3.6% in 2024, down from 5.3% in 2023, remaining though, at elevated levels. In February 2025, core inflation decelerated to 4.2% from 4.4% in January due to the decline in services inflation.

**PPI inflation** for the domestic market turned negative in March 2023 mainly because of deflationary rates in the energy sub-index. In 2024, on average, it remained in negative territory (-2.4%). In January 2025, it returned to positive ground again.

**Import prices inflation** had also been negative since February 2023, reflecting the reversal of energy prices. In March 2024 import price inflation returned to positive territory and in the course of 2024, import prices inflation oscillated in line with import energy inflation and overall remained in negative territory (-2.0%). In January 2025, it recorded an increase of 0.1%.

**Domestic price pressures**, as captured by changes in GDP deflator, had started increasing in 2021 and picked up further in 2022 and 2023. Up to mid-2023, unit profits had contributed the largest share of the increase in the GDP deflator showing that firms had managed to pass on cost shocks associated with the surge in energy and other intermediate production prices to final prices. In 2024, the GDP deflator remained relatively elevated largely on account of the rise in unit labour costs.

#### Real estate market trends remain positive.

In 2023, both **housing and commercial property prices** (prime office and retail) increased at a strong pace and continued rising in 2024 due to both high external and internal demand. Prime locations and investment characteristics property are leading the market.

**Apartment prices** (in nominal terms) further increased in 2024:Q4 by 6.6% y-o-y, though at a decelerating pace for the last seven consecutive quarters, registering a cumulative rise of 73% since 2017:Q3 (lowest level), although still 0.4% lower compared to their historical peak in 2008:Q3. Residential investment (seasonally adjusted ELSTAT data at constant prices) increased, on an annual basis, by 29.1% in 2024:Q4 but still remains at a low level as a percentage of GDP (2.7%). Housing affordability has emerged as a major concern, driven by a limited supply of quality, affordable residential stock.

In 2024:H1, **prime office prices** increased by 4.2% y-o-y and **prime retail prices** increased by 7.8% y-o-y. An increase was also recorded in both office and retail rents, by 2.2% and 6.2% y-o-y, respectively.

1 Monthly and quarterly LFS data are not compatible due to the different survey samples.

2 Unemployment rate on an annual and quarterly frequency is based on non seasonally-adjusted data, while monthy unemployment rate is based on seasonally-adjusted data.

# Labour market developments remain positive, with employment rising and unemployment falling, but there are challenges related to labour market tightness.

**Total employment** rose in 2024:Q4, mainly due to employment growth in construction, trade, tourism and professional services sectors. Latest monthly LFS data suggest that employment continued growing in January 2025.

The **unemployment rate** decreased in 2024:Q4 by 1.0 percentage point compared to 2023:Q4. The share of long-term unemployed declined by 2.7 percentage points. In January 2025, the unemployment rate (sa) decreased compared to the previous month.

**Dependent employment flows in the private sector** (Ministry of Labour, ERGANI Information System) were positive in 2024 and much lower compared to 2023. In January 2025, dependent employment net flows in the private sector were negative due to dismissals in restaurants and retail trade.

**The number of registered unemployed (DYPA data)** decreased in January 2025, due to a decline in the number of both long-term and short-term unemployed. The number of those receiving unemployment benefits increased compared to the previous month.

The **Employment Expectations Index** (European Commission) decreased in February 2025 compared to January 2025, mainly due to a deterioration of employment expectations in retail sector.

Regarding the **tightness in the labour market**, its upward trend continued in 2024 and the job vacancy rate increased to 2.2%, from 1.6% in 2023. In particular, an increase in tightness was recorded in most sectors of the economy, while the highest vacancy rates were recorded in accommodation and food service activities, construction, manufacturing, transport and wholesale and retail trade. On the contrary, the only sector that recorded a decrease in the job vacancy rate compared to 2023 was the information and technology sector.

#### Labour costs are rising.

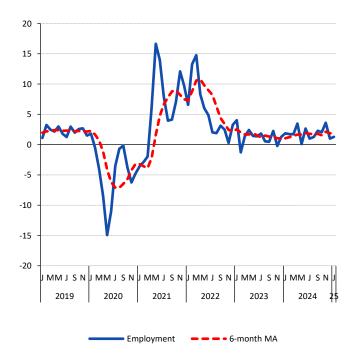

**Unit Labour Costs (ULC)** increased in 2024:Q4, as labour productivity increased at a slower pace than compensation per employee.

The ELSTAT Index of Wages for the total economy increased by 5.4% in 2024:Q4.

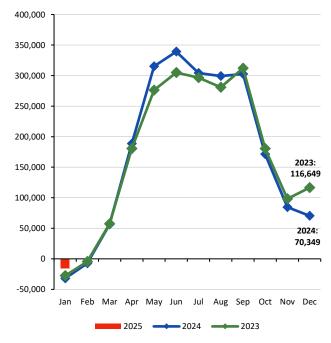

**Outlays for the remuneration of employees in the general government** (incl. social security contributions) rose by 6.0% in 2024. They had risen by 3.1% in 2023 as a whole.

According to annual accounts data from the **ERGANI information system**, the average monthly earnings stood at €1,342 in 2024, increasing by 7.3% compared to 2023. Accordingly, the number of employees earning more than €900 per month increased. In particular, compared to 2023, the number of employees with salaries between €901-1200 per month increased by 16.7%. Also, reflecting the rise of the minimum wage to €830, the share of employees earning less than €800 per month (gross) fell to 17.8%, from 30.9% in 2022.

Note: Labour productivity is real GDP (2020 prices) per hour worked. Hourly compensation is compensation of employees per hour worked (by employees).

#### **Collective wage agreements**

In **January 2025**, 18 **new firm-level agreements** were signed, covering 13,004 employees; of these, 6 agreements provided for wage increases, whereas the rest did not provide for any wage changes. In 2024, 238 new firm-level agreements were signed, covering 171,161 employees; of these, 82 agreements provided for wage increases, whereas the rest did not provide for any wage changes.

#### **Recent selected wage agreements:**

According to a decision signed by the Minister of Labour on 29 April 2024, the coverage of the branch **collective agreement in private insurance enterprises** was extended to all employees in the sector.

In December 2023, a two-year branch agreement for the cement industry provided for increases of 5% as of 1 Jan. 2023 and 5% as of 1 April 2023 (both retroactively), and of 4% as of 1 Jan. 2024; there had been no increases during 2021 and 2022.

In June 2023, a two-year branch agreement for the food and beverage industry, covering approximately 400,000 employees, provides for increases of 5.5% as of 1 June 2023 and 5% as of 1 June 2024.

In April 2023, a two-year branch collective agreement for the tobacco industry, provided for increases of 4% to 6.8% for 2023 and 2024.

In December 2022, a two-year agreement for hotel employees provided for a 5.5% wage increase as of 1 Jan. 2023 and an additional 5.0% as of 1 Jan. 2024.

In April 2022, a three-year agreement for banks provided for increases of 2% as of 1 Oct. 2022, 1% as of 1 Dec. 2023 and 2.5% as of 1 Dec. 2024.

#### **Minimum wages**

The statutory minimum wage rate increased by 9.4% as of 1 April 2023, bringing the minimum monthly salary to  $\notin$ 780. Previous minimum wage increases: in 2022 (9.5%), in 2019 (11%). As of 1 April 2024, the statutory minimum wage rises by 6.4%, bringing the minimum monthly salary to  $\notin$ 830. Overall, since end-2018, the minimum wage increased by a total of 41.6%. In January 2025, the procedure for a new minimum wage increase has been initiated. The new minimum wage will be implemented in April 2025.

On December 5, a law was voted that incorporates the European Directive 2022/2041 on adequate minimum wages in the European Union and introduces a new way of calculating the statutory minimum wage and minimum daily wage. The new calculation method will apply from 2028 and the minimum wage will cover all private and public sector employees. In particular, the minimum wage and the minimum daily wage are adjusted, after consultation conducted every year, based on a rate resulting from the sum a) of the annual rate of change in the consumer price index between July 1 of the previous year and June 30 of the current year for the lower twenty percent (20%) of the household income distribution and b) half of the annual percentage change in the purchasing power of the general wage index over the same time period. Also, the law introduces provisions to strengthen the role of social partners in the wage determination process, as well as regulations to strengthen collective bargaining.

#### Labour market policies

As of July 1, 2024, the **digital work card** in industry and retail is fully implemented. Gradually, the application of the measure will be extended to all businesses in the country.

At the same time, **the possibility of declaring and applying six-day work** has been activated in businesses that by their nature are in continuous operation and in those that already operate on a 24-hour basis five or six days a week. The possibility of six-day work was established by articles 25 and 26 of Law 5053/2023 with the aim of combating undeclared work and also increasing the income of employees, since their daily wage for the 6th day is increased by 40%.

From January 1, 2025, insurance contributions have been reduced by 1 percentage point (0.5 percentage points in employee contributions and 0.5 percentage points in employer contributions), which will contribute to strengthening the competitiveness of Greek businesses and maintaining jobs.

Source: Bank of Greece

# In 2024, the current account deficit widened mainly due to the deterioration in the balance of goods.

The **current account deficit** rose in 2024, compared to 2023, due to a deterioration in the balance of goods and, to a lesser extent, in the primary income account, which was partly offset by an improvement mainly in the secondary income account but also in the balance of services.

**Real exports of goods** decreased as fuel and non-fuel goods exports declined. Pharmaceuticals, food and beverages as well as textiles exports mainly contributed to the decrease, despite the positive contribution by the basic metals and chemical products.

**Real imports of goods** recorded an increase, mainly driven by imports of industrial and capital goods as well as of non-durable consumer goods.

The **services balance surplus** recorded an increase y-o-y, reflecting an improvement primarily in travel and other services balances, while the surplus of transport balance posted a decrease. Non-residents' arrivals and receipts increased by 9.8% and 5.4%, respectively.

The **transport surplus** posted a small decrease despite the improvement in the sea transport balance. Freight rates (based on the ClarkSea Index) increased by 6.0% y-o-y; dry bulk rates increased by 22.5%, while tanker rates decreased by 12.8%.

**FDI inflows** were supported by the stronger investment in new shares and real estate sector. They were mainly directed to manufacturing, real estate, financial and transportation and storage. The main countries of origin were the United Arab Emirates, Germany, Italy, Hong Kong and France.

**FDI outflows** mainly refer to new equity and mergers and acquisitions. The main country of destination is United Kingdom. One of the main transactions is the purchase of shares of Hellenic Bank Public Company Limited from Eurobank SA.

In **December**, the **current account** deficit increased y-o-y, mainly due to a deterioration in the secondary and, to a lesser extent, in the primary income accounts, which was partly offset by an improvement in the balances of goods and services.

The goods deficit shrank reflecting a larger rise in exports than in imports. In real terms, both exports and imports of non-oil goods increased.

The surplus of the **services balance** increased due to an improvement in all subaccounts but primarily in the travel balance. **Non-residents' arrivals** and **receipts** increased by 15.3% and by 33.3%, respectively.

\*\*including REPowerEU

Source: Bank of Greece

In 2024, Greece received  $\leq 1.9$  bn from **farmers' subsidies**, following the receipt of  $\leq 2.5$  bn in 2023, whereas no significant disbursements were made regarding structural funds that had reached  $\leq 1.3$  bn in the previous year.

The implementation of the **Multiannual Financial Framework (MFF)** 2021-2027 has already started, though still at a slow pace. According to EU data (as of December 23, 2024),  $\in$  2.2 bn have been disbursed since the beginning of the program.

Regarding the **Recovery and Resilience Facility (RRF)**,  $\in$ 8.6 bn in grants and  $\notin$ 9.6 bn in loans have already been received by Greece since 2021 (NGEU including REPowerEU). On January 25, 2024 Greece received  $\notin$ 158.7 mn as pre-financing under REPowerEU –  $\notin$ 5.0 bn loans and  $\notin$ 0.8 bn grants were made available for Greece under the specific plan. On July 24 and October 16, 2024 the country received  $\notin$ 2.3 bn in RRF loans and  $\notin$ 1.0 bn in RRF grants, respectively. The fifth payment request for  $\notin$ 3.1 bn RRF grants and loans

combined, was submitted on December 20, 2024, having completed the related milestones, The European Commission endorsed a positive preliminary assessment of this request on March 19, 2025.

## Cost competitiveness gains remain thanks to lower ULC vis-à-vis the main Greece's trading partners.

Source: ECB

1: + appreciation of euro

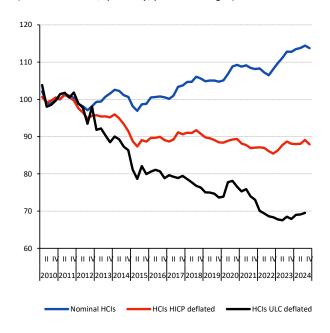

2: + deterioration of competitiveness

**The nominal effective exchange rate:** Based on ECB Harmonised Competitiveness Indicators (HCIs), the nominal effective exchange rate (NEER) for Greece continued to appreciate further, although with a decreasing growth rate, due to the appreciation of the euro.

**Labour cost competitiveness:** ULC-based competitiveness having improved significantly in 2022, mainly driven by strong gains in productivity relative to Greece's main trading partners, remained almost unchanged in 2023 despite the strong appreciation of the nominal effective exchange rate. In 2024:Q3 labour cost competitiveness deteriorated in Greece, as ULC differential overcompensated for the 1.4% appreciation of the NEER.

**Price competitiveness**: the deterioration in price competitiveness registered in 2023 continued, though at a decelerating rate, in 2024, as the impact of the significant nominal appreciation during these quarters was only partly offset by Greece's lower inflation relative to its main trading partners inside and outside eurozone.

#### Non-price or structural competitiveness

Non price/structural competitiveness indices recently published provide a rather positive picture as progress in some areas is evident, namely in the tax wedge front, government performance, business efficiency and digital transformation of the economy.

#### Latest publications

According to the latest **Democracy Index of Economist** (published on 27 February 2025), Greece ranks 25th among 167 countries and its ranking deteriorated by 5 positions. However, its regime type remains within the full democracy group.

Sources: \*ELSTAT (2023) and Ministry of Finance: 2025 Budget (2024-25) and Medium-term fiscal structural plan 2025-2028 (2026-28). The debt projections of the Medium-term fiscal structural plan are not presented as they are not consistent with the methodological change in the recording of public debt introduced in the 2nd EDP Notification (22.10.2024). \*\* Medium-term fiscal structural plan 2025-2028.

#### General government primary outcome in 2023 came out better than expected

The 2023 general government primary outcome, as published in the context of the 2nd EDP notification (22.10.2024), recorded a surplus of 2.1% of GDP (higher than in the first notification, 1.9% of GDP) mainly on account of higher receivables relating to EU grants.

#### Medium term fiscal outlook in line with the revised fiscal framework

According to the **Medium Term Fiscal-Structural Plan (MTP) 2025-2028**, which was published on September 30, in the context of the revised fiscal framework: (i) The fiscal balance is safely under the 3% of GDP threshold level of the SGP preventive arm and, moreover, an improvement of 0.6 p.p. is marked against the 2024 Stability Program projections for years 2024 and 2025; (ii) The structural primary balance is expected to reach 2% of GDP in 2025 and thereafter increase by 0.1p.p. per annum; (iii) Public debt as a % of GDP maintains a downward trajectory owing to primary surpluses and a beneficial snowball effect. Moreover, the debt sustainability analysis indicates that the downward debt trajectory remains intact under three adverse scenarios; (iv) Net primary expenditure is projected to increase by more than 3% yearly. The Commission assessed that **the MTP fulfils the requirements** of Regulation (EU) 2024/1263 as Greece's net expenditure growth path is consistent with EU recommendations to ensure government debt remains on a plausibly downward trajectory while maintaining deficits below the 3% of GDP threshold.

#### Budget 2025 projections in line with the revised fiscal framework

According to the **2025 Budget**, which was published on November 20, the general government primary outcome is estimated at a primary surplus of 2.5% of GDP in 2024 and 2.4% of GDP in 2025 (on the back of economic growth +2.2% in 2024 and +2.3% in 2025). Public debt as a share of GDP is projected to decline by 9.9 pp, to 154.0% of GDP, in 2024 and further by 6.5 pp, to 147.5% of GDP, in 2025, due primarily to the snowball effect and, to a smaller extent, to primary surpluses. In 2024, there is also a significant downward contribution (of 2.5 pp) of the deficit-debt adjustment due to privatization receipts and cash reserves used for early debt repayment. The fiscal outlook is assessed to be in line with the provisions of the existing Stability and Growth Pact, reactivated as of 2024.

#### Fiscal measures in 2025 include tax cuts and pension increases

**New measures for 2025** amount to  $\leq 1.1$  bn including mainly the reduction of the social security contribution rate by 1 pp ( $\leq 440$  mn), the abolition of the self-employed contribution ( $\leq 125$  mn) and pension increases ( $\leq 398$  mn). These measures serve four broad purposes: (i) to support household disposable income, (ii) to address the ageing population implications, (iii) to mitigate the tightness in the housing market and (iv) to address the adverse consequences of natural disasters.

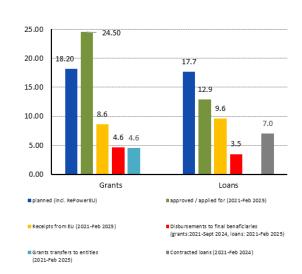

#### RRF funds are being absorbed yet backloading is witnessed

**Absorption:** Greece is progressing well compared to peers regarding the **RRF receipts based** on the successfully completion of the respective **milestones and targets**. So far Greece has received €18.2bn from the RRF (€8.6 for grants and €9.6 for loans), that is 51% out of the total envelop of €36 bn (being among the top countries above EU average), having successfully completed 28% of the total landmarks. In March 2025, preliminary approval was granted by the European Commission for the 5<sup>th</sup> payment request for a total of €3,1 bn (of which €1.3 bn for grants and €1.8 bn for loans). Including this amount, Greece will have received a total of €21.3 bn or 59% of the total envelop having successfully completed 35% of the total landmarks.

**Execution:** The **loan component** (signing of contracts) is progressing broadly in line with the original schedule. However, the **grant component** (payment execution) has become more backloaded than originally projected mainly due to administrative burden heavier than originally anticipated, as also witnessed in most EU countries. More specifically:

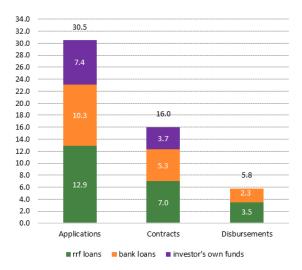

**Grants:** Out of a total envelope of  $\pounds$ 18.2 bn, cash receipts from the EU amount to  $\pounds$ 8.6 bn. Until September 2024, the entire project envelope has been approved with a margin, of which  $\pounds$ 4.6 bn have been disbursed to the final beneficiaries. Another  $\pounds$ 4.3 bn have been transferred from the state to other entities inside and outside the general government until January 2025.

**Loans:** Out of a total envelope of €17.7 bn, cash receipts from the EU amount to €9.6 bn. Until January 2025 €3.2 bn had been disbursed to the final beneficiaries. The contracted projects amount to €6.7 bn.

Table 5.2: General Government (% GDP) - ESA 2010

Source: ELSTAT, PDMA

\*PDMA estimates (Public Debt Bulletin Feb 2025)

According to the 2nd EDP notification (22.10.2024), **both the general government balance and the primary balance marked an improvement in 2023 relative to 2022**, recording a smaller deficit and a significant primary surplus respectively as a share of GDP, overshooting the annual target, largely as a result of growth in the economy as well as the inflation increase.

The improvement in the **primary balance** mainly reflects a decrease in the share of primary expenditure as a % of GDP (by 3.5 p.p.) which overcompensated the decrease in the share of revenue (by 1.4 p.p.). Y-o-y, primary expenditure decreased by 0.7%, mainly driven by a decrease in subsidies (-64.4%), due to the unwinding of the pandemic and energy measures. On the opposite direction, there was an increase in social payments (+6.0%) due to the increase in pensions and the distribution of social benefits to low-income groups, in compensation of public employees (+3.2%), in intermediate consumption (+4.7%) attributed to the price increases and an increase in public investment (+13.8%)

Revenue also increased y-o-y (+3.7%) due to increased economic activity, and the overhaul of the tax and social insurance contribution deferral schemes.

The **debt to GDP ratio** decreased to 163.9% in 2023, from 177.0% of GDP in 2022 (lowest since 2010), due primarily to the denominator effect (higher nominal GDP).

Please note that a methodological change as regards the statistical recording of deferred interest on EFSF loans increasing the face value of general government gross debt was implemented in 2013-2023, following <u>Eurostat's advice</u>. Specifically, for 2023 compared to the 1<sup>st</sup> EDP notification (22.04.2024), the debt ratio was revised upwards by 2.0 p.p. to 163.9% of GDP at the end of 2023, owing to an increase in the debt by 5.5 p.p due to the inclusion of the deferred interest, which was partially offset by the decreasing effect (-3.5 pp) of the upward revisions in nominal GDP. However, the statistical treatment of deferred interest does not affect the public debt sustainability.

According to PDMA estimates, the general government debt in 2024 was €365.5 bn (154.2% of GDP), 100% of which was at a fixed rate. The weighted average maturity stood at 18.79 years, while the time to next refixing of the debt portfolio at 18.17 years. The cost of debt, as measured by the actual general government debt annual interest payments after swap (cash basis) as a proportion of public debt stood at 1.33%.

#### Quarterly General Government figures - ESA 2010 (2024 Q1-Q3) - Improvement

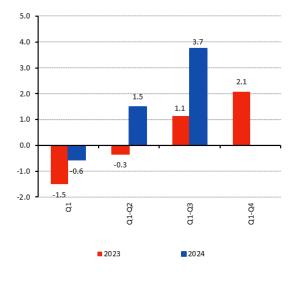

**The general government primary balance improved** as a % of GDP (by 2.6 pp) in the first three quarters of 2024 against the same period in 2023 primarily due to a base effect arising from the unwinding of 2023 energy measures.

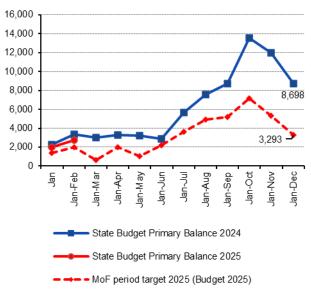

**Revenues increased y-o-y** (+7.7%) in the first semester of 2024 due to increased tax and EU revenues. **Primary expenditure decreased** (-0.6%) mainly due to the withdrawal of subsidies in the context of energy support measures, the decrease in intermediate consumption due to subsiding inflation and a base effect in capital transfers owing to the Attica Bank recapitalization last year.

**The Public debt ratio decreased** by 7.4 pp of GDP compared to 2023:Q4, due to the rise in nominal GDP.

2 Communications as all finance along

In January 2025, **the primary general government cash outcome** recorded a lower surplus than the surplus achieved in January 2024. The deterioration is largely due to lower revenues from the public investment budget and from the RRF. Expenditure increased mainly on account of higher social transfers related to increases in pensions through the indexation mechanism (+2.4%), the increase in the rate of new pension awardsand pension arrears' clearance.

In January 2025, the stock of arrears (excluding pension claims) increased by  $\notin 0.4bn$  (mainly in hospitals) compared to December 2024. About 50% of total arrears (excluding tax refunds) originate in hospitals due to their reporting pre-clawback<sup>2</sup>. Post-clawback, hospital arrears are much lower and

<sup>&</sup>lt;sup>2</sup> The clawback mechanism, introduced by the Greek legislator in 2012 as part of the effort to reduce excessive health expenditure weighing on public debt, safeguards the level of public expenditure

follow a downward trend since 2023.

**The Central Government Debt** at end-January 2025 was €403.2 bn (162.9% of GDP) compared to €403.9 bn (170.0% of GDP) at end-December 2024.

The **State primary balance** in January-February 2025 recorded a surplus (1.1 % of GDP) compared to a higher surplus (1.4% of GDP) in the same period in 2024. Compared to the period target (according to the 2025 Budget), the primary balance over-performed by €0.7 bn mainly due to (i) higher taxes largely due to higher receipts from the 7<sup>th</sup> installment of personal income tax of 2024 and VAT, accruing back to 2024, and (ii) lower primary expenditure owing to lower transfers to hospitals.

#### Financing

In 2024, Greece attracted €9.6 bn from the **capital markets**. In December 2024 Greece proceeded with an early repayment of the Greek Loan Facility (GLF) loans due in 2026-2028 amounting €7.9 bn facilitated by ESM's and EFSF waiver grants. According to PDMA's funding strategy for 2025, the Hellenic Republic plans to issue €8bn in GGBs in 2025. In January 2025, Greece attracted €4 bn from the issue of a 10-year bond with a yield of 3.64%. In February 2025, another €250 mn was attracted from the reopening of the January 10-year bond with a yield of 3.24%. In March 2025, €3bn was attracted from the re-opening of the 15 and 30 -year bond issuance with a yields of 4.06% and 4.41% respectively.

# Debt Sustainability Analysis - Risks to debt sustainability remain contained in the medium term

This mainly reflects (i) the highly concessional terms of official sector loans (involving grace periods, long maturities and interest deferrals) comprising the bulk of the accumulated debt stock, (ii) a 100% share of fixed-rate debt of the central government (at end-Sept 2024) and (iii) a very sizeable cash buffer in excess of 15% of GDP (at end-Sept 2024). In the longer term, however, sustainability risks remain elevated. As concessional loans get rolled over on market terms, exposure to adverse shocks will increase, demanding firm commitment to fiscal vigilance. Under the baseline assumptions of commitment to fiscal targets and effective utilization of NGEU funds, the debt to GDP ratio remains firmly on a downward trajectory and Gross Financing Needs over GDP stay safely below the 15% and 20% thresholds.

relating to hospitalization and pharmaceuticals up to a certain pecuniary limit. Essentially, when the respective public spending exceeds the thresholds of the relevant closed budgets, any surplus is 'repaid' by hospitals and pharmaceutical companies to the National Organisation for Healthcare (EOPYY), on the basis of a specific formula. When hospital arrears are reported pre-clawback, they are inflated as they do not take into account the surplus repayment to EOPYY.

#### Limited rises in bank deposits

In 2024, **private sector deposits** continued to rise overall (by €8.7 bn) mostly reflecting an increase in corporate deposits (Charts 36 and 37). **Household deposits** also increased in 2024, but the increase has been limited compared to previous years mainly due to transfers of funds into other saving options, such as TBs and mutual funds, offering considerably higher returns.

In January 2025, **bank deposits** of non-financial corporations and households declined by  $\leq$ 3.8 bn and  $\leq$ 1.0 bn respectively consistent with the seasonal pattern at the start of the year.

Source: Bank of Greece.

\*Data on the volume of bank loans do not include the amount of loans provided with public funds in the context of loan co-financing schemes ran by institutions such as Hellenic Development Bank, the EIB Group (e.g. TEPIX III loans or My Home loans) or the RRF. Volumes contain only the commercial bank participation in these loans towards NFCs or households.

#### Robust corporate loan growth - Less negative dynamics in loans to households

**Corporate bank credit** expansion accelerated considerably during 2024 under the favourable impact of solid economic growth, declining interest rates and supportive public programmes, underpinning both increased loan demand and supply (Chart 38).

In January 2025, **bank credit to NFCs** (based on net flows) decreased by €0.9 bn but the annual rate of growth accelerated to 15.9%.

The contraction of **bank loans to households** continued in 2024 reflecting a shrinking stock of housing loans, albeit at a somewhat decelerating pace; consumer loans have been recording positive rates of growth already since mid-2022 (Chart 39).

In January 2025, the contraction rate of **housing loans** continued to decelerate to -2.5% while the annual growth rate of consumer loans stood at 6.0%.

According to the **AnaCredit data**, in 2024, new corporate loan disbursements stood at  $\leq 12.2$  bn, well above the corresponding amount in 2023 ( $\leq 9.9$ ) (Chart 40).

#### 6.3 Bank interest rates on new loans\* and deposits

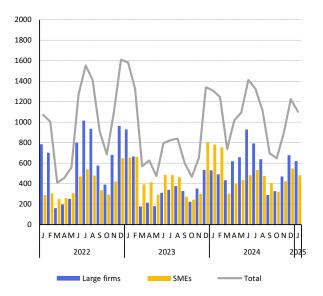

Source: Bank of Greece.

\*Data on bank loan rates do not reflect the concessionary rates charged by institutions such as the Hellenic Development Bank, the EIB Group or the RRF, on the part of the loan provided with public funds in the context of cofinancing schemes (such as TEPIX III loans or My Home loans). The above loan rates reflect only the market rate charged by commercial banks on their participation in these loans.

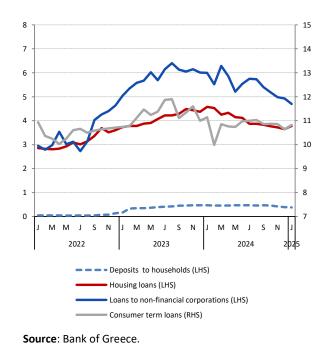

## Chart 40: Amounts of new loans to large firms and to SMEs<sup>1</sup>

(3-month moving average, EUR mn)

#### Chart 41: Bank interest rates

(percentages per annum)

#### Source: Bank of Greece, AnaCredit.

Note: AnaCredit is a common dataset with detailed information on individual bank loans in the euro area. Data solely concern loans to legal persons (corporations).

#### Bank lending rates declining but still high

Bank lending rates have been on a gradual declining path initially owing to expectations for ECB policy rate cuts and subsequently in tandem with actual policy rate cuts. Specifically, **the cost of new bank loans** to NFCs peaked in August 2023 at 6.4% and has been on a broadly downward path since then. The average **bank interest rate on new housing loans** peaked somewhat later, in January 2024 at 4.6%, and it has been declining since then.

In January 2025, **bank lending rates** decreased further for new corporate loans (to 4.70%) but rose for new housing loans (to 3.78%) (Chart 41).

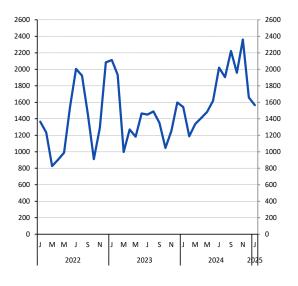

Data on gross flows of bank loans show that in 2024 **new bank corporate term loan agreements** rose significantly to around  $\notin$ 24 bn compared to  $\notin$ 17 bn in 2023 (Chart 42). In January 2025, these loan agreements stood at  $\notin$ 0.9 bn significantly above the respective month in 2024 ( $\notin$ 0.5 bn).

### Continued support to bank lending from financial instruments and the RRF

During 2022-2026, credit provision to the economy is expected to be buoyed by the **resources provided through the Recovery and Resilience Facility (RRF) of the NGEU, and the implementation of the National Recovery and Resilience Plan (NRRP) "Greece 2.0".** After the approval by the EC of the modified NRRP, total available investment resources reach up to €36 bn, comprising €18.3 bn in subsidies and €17.7 bn in loans. After the disbursement of the 4<sup>th</sup> instalment of RRF funds toward Greece, the total inflow of RRF loan funds amounts to €9.6 bn.

Greek banks and European financial institutions participate in the process of channelling to the economy the loan segment of the NRRP. They co-finance, with the State, investments in prioritized sectors of the economy (such as green and digital economy, exports, research, and innovation). Investments financed through RRF loans are covered by RRF funds (up to a maximum of 50% of the investment plan), by financial institutions participation (commercial banks and/or European financial institutions, at least 30% of the investment plan) and investor's own funds (at least 20% of the investment plan).

As far as **RRF loans** through Greek commercial banks are concerned, up to February 2025, 420 loan agreements had been signed financing investments with a total budget of  $\leq 16.0$  bn (RRF loans:  $\leq 7.0$  bn, bank loans:  $\leq 5.3$  bn, investors' own participation:  $\leq 3.7$  bn). Since the start of the implementation of the NRRP in July 2022, the amount of bank loan agreements co-financing RRF projects represents around 10% of total new bank term loan agreements over the same period.

In addition, financial resources, partly intermediated through local banks, continue being directed to the economy through financial instruments offered in the context of various European and national initiatives. Specifically, the Hellenic Development Bank (HDB), the EIB and the EIF co-finance or guarantee loans extended by commercial banks, mostly to non-financial corporations and secondarily to households. In 2024, bank loan disbursements to NFCs supported by these financial instruments amounted to almost €3.7 bn (2023: € 2.0 bn) thus representing 14% of total new bank business loans (40% of new bank loans to SMEs respectively).

4 = increased/loosened somewhat 5 = increased/loosened significantly

### I. Bank Lending Survey results for Greece (2024:Q4 compared to 2024:Q3):

# Increased demand for corporate loans, credit standards overall unchanged but some easing on terms and conditions for housing loans

In 2024Q4, Greek banks kept **credit standards** unchanged (Chart 44). As far as overall lending **terms and conditions** are concerned, they remained unchanged in the case of corporate and consumer loans; still, an easing of interest rate margins on corporate loans has been reported. Terms and conditions on housing loans were seen to have eased slightly regarding non-interest rate charges and margins on average housing loans owing to pressure from competition.

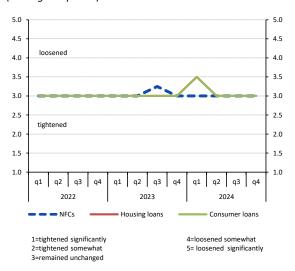

Greek credit institutions assessed that there was an expansion in the **demand for bank credit** by NFCs during 2024Q4 comparing with 2024Q3 (Chart 45) mainly as far as longer-term loans and loans for large firms are concerned. According to survey responses, factors that contributed positively to demand included increased need for NFCs to finance fixed investment, inventories and working capital, M&A activity, and lower interest rates.

According to the responding institutions there was a decrease in the demand for housing loans during 2024Q4, whereas the demand for consumer credit remained unchanged (Chart 45). The level of interest rates and households' recourse to own savings and other sources of finance were seen as factors that continued to exert a negative influence on housing loan demand.

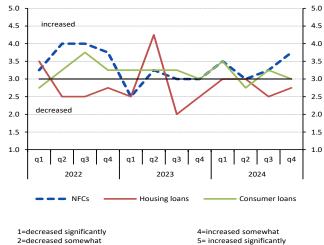

In response to one of the ad hoc questions regarding their **funding sources**, Greek banks stated that their access to funds from longer-term bond issues continued to improve while some improvement has also been reported for short-term retail deposits and for very short-term money market funding. In connection with the effect from NPLs, Greek banks in the survey reported that there was no impact in the second half of 2024 on credit standards and terms and conditions.

<sup>1</sup> Applications satisfied mostly or in full.

<sup>2</sup> As a percentage of firms which applied for bank loan/credit line.

### II. SAFE results for Greece: October-December 2024 compared to July-September 2024

# Declining interest rates, improved availability of bank loans against a moderate loan demand from SMEs

The external financing gap faced by SMEs – i.e., the difference between the change in financing needs of firms and the change in the availability of bank loans - was perceived to have remained negative in 2024:Q4 as well as for the most part of 2024 (Chart 46).

The availability (supply) of bank credit was seen to have continued to expand compared to the previous survey round. At the same time, SMEs' needs (demand) for bank credit have been less intense overall, standing at very low levels in the case bank loans while SMEs' needs for credit lines remained rather stable (Chart 47).

Among the factors affecting the supply of external financing, the influence of the general economic outlook has remained negative while SMEs continued to report a strong positive impact of the factors related to their own creditworthiness (namely firms' specific outlook, capital, and credit history). More firms indicated an increase in the willingness of banks to lend as well as in the willingness of trading

partners to provide credit. However, SMEs continued reporting that their access to public financial support programmes deteriorated.

**The percentage of firms which applied for a bank loan** remained broadly stable compared to the previous survey round (19% from 20%). The most frequently cited reason for not applying for a bank loan was sufficiency of internal funds with the respective share of firms rising to a high level of 53% (up from 40%). At the same time firms' discouragement for fear of rejection by the bank rose (11% up from 7%) but remained low overall.

As far as the **outcome of bank term loan applications** is concerned, the rejection rate decreased slightly (7% down from 8%) while the approval rate (percentage of applications satisfied mostly or in full) increased (52% from 50%). Regarding **terms and conditions of bank loans**, firms reported a decline in the interest rate for bank loans (-13% down from 3%), for the first time since the start of the quarterly conduct of the survey in 2024Q1, which is an indication that bank interest rates charged to SMEs have started to decline as a result of the monetary policy easing cycle. However, SMEs also indicated stricter collateral requirements and a tightening in other loan terms and conditions (loan covenants etc.).

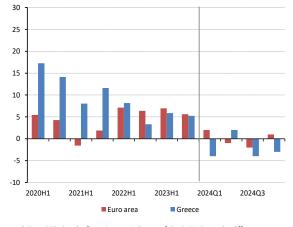

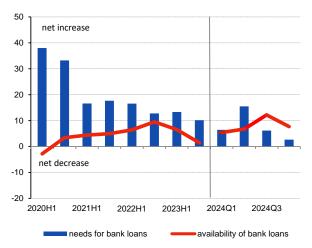

Chart 46: External financing gap faced by SMEs in Greece and the euro area (weighted net balances)

\* Since 2024Q1, the financing gap indicator of the SAFE shows the difference between the change in needs and the change in availability for bank loans as reported by SMEs. Up to 2023H2, it referred to five instruments of external financing (bank loans, credit lines, trade credit, equity and debt securities issuance). A positive value of the indicator points to an increase in the financing gap.

Source: EC/ECB, SAFE.

**Chart 47: Needs and availability of bank loans for SMEs in Greece** *(net percentage)* 

\* Net percentage of firms is defined as the difference between the percentage of firms which replied that their needs/the availability of bank loans increased minus the percentage of firms which replied that their needs/the availability of bank loans decreased.

### Market pricing of Greek government bonds follows euro-area developments closely.

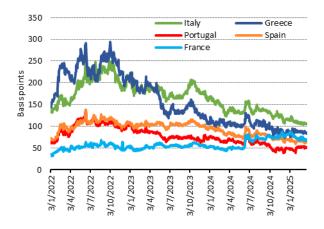

**In 2023, Greek government bond (GGB)** yields and spreads, vis-à-vis euro area benchmark bonds, declined, **amid upgrades of Greece's sovereign credit ratings**; **in 2024**, GGB yields moved broadly in line with yields of other euro area sovereigns, with a rise early in the year being reversed after investors formed expectations for upcoming policy rate cuts.

In the last three weeks, **euro area sovereign bond yields rose significantly and yield curves steepened** (Table 7.1 and Chart 48), after news that European countries intend to increase defense spending.

**Broadly in line with these developments, yields on medium- to long-term GGBs** rose and the yield curve steepened compared to three weeks ago (Chart 49).

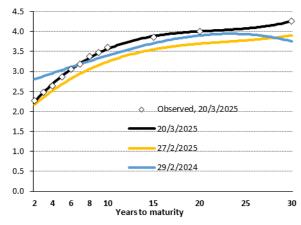

(yield differentials vis-à-vis the Bund in bps; daily data)

Notes: 1) The abovementioned ratings correspond to the long-term issuer ratings for bonds. The sources for these data are the rating agencies referred to in the first column on the left. 2) The spread of Greece corresponds to the Greek-10y vs German-10y spread, while the across-countries average BBB spread, adjusted for exchange rate risk, is calculated against the US 10 year yield. 3) The BBB-average spread is calculated by grouping a sample of 75 countries in rating classes.

### All rating agencies now assign Greece a rating in investment grade...

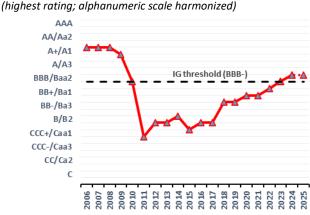

The **sovereign credit ratings assigned to Greece** have followed an upward trend for a long period of time, almost uninterruptedly since 2015, resulting to regaining the Investment Grade (IG) in 2023 (see Chart 50).

**On 13 March 2025, Moody's upgraded the Greek sovereign to investment grade ('Baa3' from 'Ba1'),** with a stable outlook, citing better public finance and bank fundamentals. **On 7 March 2025, DBRS also upgraded the sovereign by one notch to 'BBB'** (with a stable outlook), reflecting the agency's view of lower legacy risks in the banking sector as well as fiscal overperformance. As a result, all rating agencies assign to the Greek sovereign investment grade status. DBRS and Scope Ratings assign Greece a credit rating of 'BBB' (outlook both stable) while Fitch, S&P and Moody's, assign a rating of BBB-/Baa3 (S&P's outlook is positive).

According to rating agencies, **further upgrades of the sovereign may result** from sustained economic performance, prudent fiscal policies, a continuation of structural reforms fostering the competitiveness of the Greek economy and a further reduction of banks' stock of NPLs, with the latter thus moving closer to the EU average.

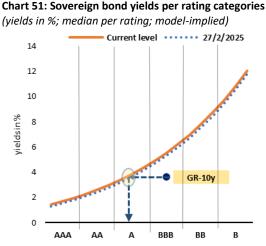

### ...while GGBs' pricing is favorably compared to other BBB-rated sovereign bonds.

**Markets price Greek sovereign bonds** more favourably than the median of BBB-rated sovereign bonds; in particular, the GGB 10-year yield lays firmly at single-A levels (see Chart 51).

Source: LSEG, Bank of Greece.

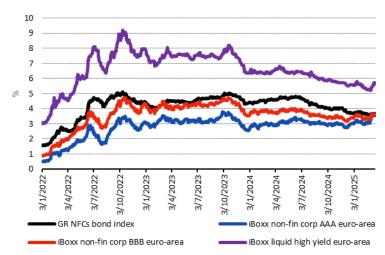

Note: Data on yields of the Greek corporate bonds refer to the yield of the GR NFC bond index of the Bank of Greece (Bloomberg ticker: BOGGRNFC). Data on other euroarea corporate bonds (namely EA NFC BBB-rate bonds and EA liquid HY NFC bonds) correspond to the yields of the indices iBoxx EA BBB NFC and iBoxx EA liquid HY NFC bonds, respectively.

### Large Greek NFCs are sustainably funded by international investors...

Bonds issued by Greek non-financial corporations (NFCs) have largely followed the developments in other euro-area corporate bonds (Chart 52). In 2023, Greek NFCs' bond issuance activity was low, reaching in total  $\notin$ 600mn, in line with their low refinancing needs, while in 2024 Greek companies issued new bonds for a total amount of  $\notin$ 2.1 bn.

### ...while their market cost of funding is close to that of BBB-rated EA NFCs.

**Yields of GCBs** rose in the period under review, however significantly less than yields on euro-area lower-rated corporate bonds (see Table 7.3).

**Chart 52: GR NFCs bond index & iBoxx indices for EA non-financial corporates** *(percentage points; daily data, 2019 to date)*

a) Volatility measures are standard deviations of daily returns with a fixed monthly rolling window.

b) Intraday volatility is the range of intraday prices, relative to the closing price.

# Share prices of listed Greek companies have posted strong positive returns in 2023 & 2024, in line with the good performance of the economy.

Share prices in the Athens Stock Exchange (ASE) recorded strong positive returns in 2024, outperforming euro area stock markets (Chart 53); this development took place in an environment of low, by historical standards, market volatility in the ASE.

**Share prices of Greek listed companies** rose, overall, vis-à-vis three weeks ago, as did prices in other euro area stock markets (see Table 7.4).

Sources: 1) income statement items, NPE ratio, and CET1 ratio (consolidated data; solo data for NPE ratio of SIs and LSIs): banks' financial statements, ECB, and Bank of Greece, 2) MREL ratio: SRB and banks' financial statements.

Notes: CET1 ratio: fully loaded CET I regulatory capital divided by total risk weighted assets. Latest available data for LCR is for Sep. 2024.

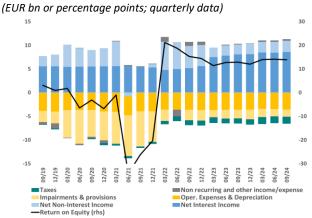

### Greek banks' profitability increased, while their financial resilience also strengthened...

The growth in the net profits of the four Greek systemically important banks continued in 2024 (Chart 54), as a result of a continued rise in net interest income, as well as higher net fees & commissions income and trading & other income. The overall bottom line was also supported by a significant decline in impairment losses on loans & advances to customers.

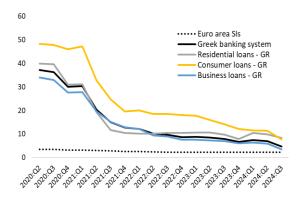

The aggregate capital position of systemically important banks rose in December 2024 compared to a year earlier, as CET1 capital increased relatively more than risk weighted assets. Banks' capital quality is also expected to benefit from higher profitability, as banks' plans for an acceleration in deferred tax credit (DTC) amortization materialize. Greek systemic banks' liquidity positions remained strong at end-2024, with the LCR (liquidity coverage) ratio more than double the required threshold (100%) and well above that of euro area peers. The aggregate NPE ratio of systemically important banks went further down in December 2024 vis-à-vis end-2023 (Chart 55).

Greek systemic banks, according to their announced results, have already met their final MREL targets.

Sources: Rating agencies and LSEG. Range of ratings: range of SI's highest long-term issuer rating across rating agencies.

### ...and these developments are reflected in improving bank ratings...

Credit ratings of Greek banks continue to benefit from the sovereign's upgrades (see Chart 57). Following the sovereign upgrade to investment grade, Moody's upgraded the deposit ratings of NBG and Eurobank by one notch to 'Baa1', those of Alpha Bank and Piraeus Bank by one notch to 'Baa2' and that of Attica Bank by two notches to 'Ba2'. Following a similar move for the sovereign, DBRS upgraded the deposit ratings of NBG and Eurobank by one notch to 'BBB'. At present, Greek banks' highest long-term issuer rating ranges from one notch below IG (BB+) to IG (BBB-), putting downward pressure on bank bond yields.

### ...and in declining market-based cost of funding.

Yields on senior bonds issued by Greek banks rose somewhat in the period under review (Chart 56), while those of euro area peers increased significantly.

Overall, Greek banks' funding costs remained broadly unchanged (w.a. funding rate at around 1.3% in Sep. 2024, see Charts 55 & 56) vis-à-vis June levels (1.4%), reflecting the pass-through of lower policy rates and improved credit ratings to the cost incurred from deposits, interbank borrowing and bond selling.

# 9. PRIVATISATIONS AND STRUCTURAL REFORMS

## **Privatisations**

The implementation of the revised Asset Development Plan of the Hellenic Republic Asset Development Fund (HRADF) (as last revised on 29 December 2023) is the keystone for the privatisation strategy. It includes 34 on-going projects, with some of them at an advanced stage (Attiki Odos, Egnatia Odos, ports of Alexandroupolis, Igoumenitsa, Heraklio and Volos), some marinas, properties, and healing springs.

According to the State Budget 2025, **public revenues from privatisations** amounted to  $\pounds$ 586.6 mn in 2022 and  $\pounds$ 497.3 mn in 2023, mainly due to revenues from Hellinikon and DEPA Infrastructure. For 2024, public revenues from privatizations are estimated at  $\pounds$ 4,180.4 mn, mainly from the concession contract for the operation and exploitation of Attiki Odos motorway ( $\pounds$ 3,270.0 mn). The forecast for 2025, according to the State Budget 2025, is  $\pounds$ 1,881.0 mn mainly attributed to the concession contract for the operation and exploitation of Egnatia Odos motorway ( $\pounds$ 1,350.0 mn). The forecast for 2026 and 2027 is  $\pounds$ 178.4 mn and  $\pounds$ 172.1 mn, respectively.

### **Structural reforms**

On 11 April 2023, the Ministry of Labour and Social Affairs announced the **completion of the codification of labour legislation**. Thus, the provisions for individual and collective labour law, as well as for the administrative supervision of the labour market, are now included in a single text.

The new labour law (L.5053/2023) establishes rules to simplify administrative procedures and protect the employees. In particular, it provides, inter alia: the possibility to work for more than one employer, new flexible employment contracts, six-day work with an increased daily wage, increased fines for violations of undeclared work, a probationary period of six months instead of one year for a hired employee, counting in-house training as paid work time, simplification of bureaucratic procedures for businesses that choose to implement the digital work card, criminalization of labour obstruction, creation of a digital job-finding platform. Also, the suspension of the seniority allowance is lifted from 1/1/2024 for employees in the private sector, without retroactivity (restoration of the three-year allowances, which have been suspended since 2012).

Reform and Investment projects relating to all four pillars of the **National Recovery and Resilience Plan** are in progress. Most notably major projects that have been funded so far concern: household energy upgrades, electrical interconnection of islands, electric energy storage facilities, telecommunications (microsatellites network), upskilling and reskilling of unemployed, digitalization of education and construction of central Greece highway.

According to the **2024 Ageing Report** (2024 AR), public pension expenditure as % of GDP in Greece is expected to decline by 2.5p.p. over the projection horizon (from 14.5% of GDP in 2022 to 12.0% of GDP in 2070). This represents the largest fall amongst EU member states, for whom public pension expenditure as % of GDP is on average projected to marginally increase by 0.4 p.p. by 2070. The projections are in line with the pension system sustainability clause, which requires that 2060 public pension expenditure may rise by up to 2.5 percentage points of GDP when compared to 2009 expenditure (according to the 2024 AR, in 2060 pension expenditure in Greece will be lower by 1.6 p.p. when compared to 2009). Age retirement thresholds have been revised upwards (from 67) to reflect the increases marked in the life expectancy at 65 years of age (by one year in 2027, 2036, 2045, 2054 and 2066).

According to the fourth post-programme surveillance report (June 2024):

- <u>Arrears</u>: The total stock of arrears in the public sector has increased, almost entirely due to arrears in hospitals; at the same time, the stock of pension arrears has further decreased.
- <u>Labour legislation</u>: The codification of the labour legislation is underway and still needs to be completed.
- Financial sector: Financial sector policies to tackle various legacy issues are being implemented broadly on schedule and are set to be completed in 2024. These policies refer to clearing the backlog of household insolvency cases, setting up the organisation of sale & lease back, clearing

the backlog of called state guarantees and out-of-court workout restructurings of non-performing loans.

 <u>Banking sector</u>: The workout of legacy debt by servicers is advancing but continues to face difficulties. This is in particular due to judicial obstacles, mainly in the context of liquidation proceedings.

The new release of **OECD's Product Market Regulation indicator**, which measures the distortions to competition, suggests that Greece noted the greatest improvement among the OECD members during the period 2018-2023. The regulatory framework of Greece is now close to the OECD average, as a result of significant reforms. However, there is considerable room to make the regulatory framework of the professional services (especially for lawyers) and retail sector more competition-friendly. In addition, the country should consider improving its mechanisms for assessing the impact of new and existing laws and regulations on competition, address its high non-tariff trade barriers and further align the governance of state-owned enterprises with key OECD best practices aimed at ensuring a level playing field with private firms.

# EXTERNAL BALANCES, COMPETITIVENESS

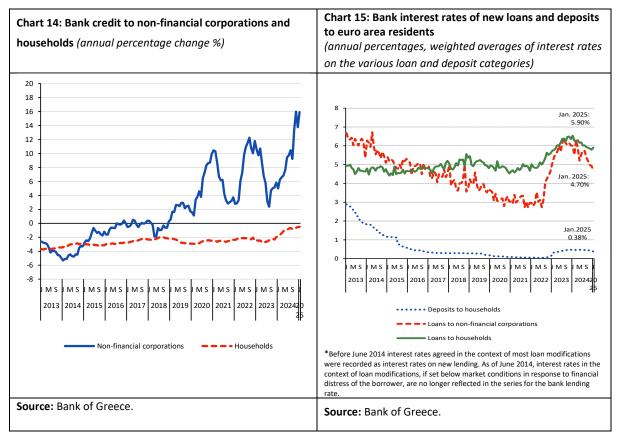

## **FISCAL**

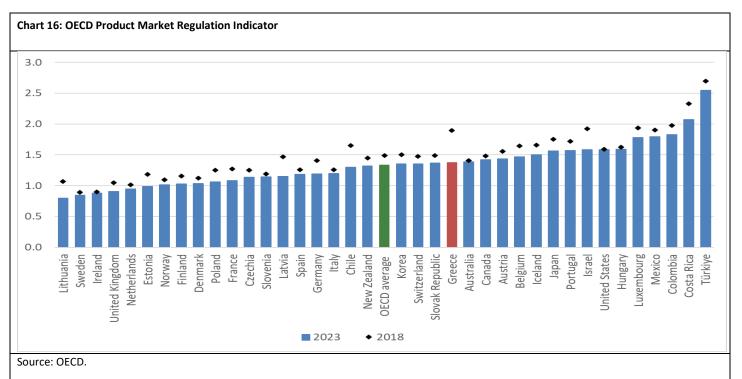

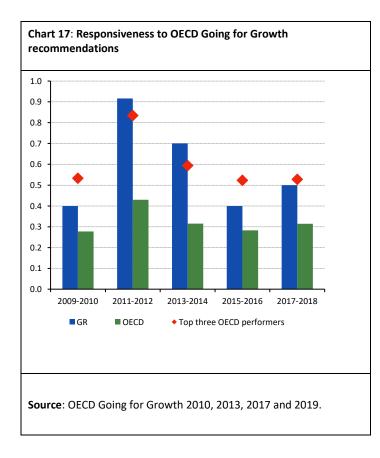

### STRUCTURAL REFORM INDICATORS

Notes: The PMR economy-wide indicator measures the regulatory barriers to firm entry and competition in a broad range of key policy areas, ranging from licensing and public procurement, to governance of SOEs, price controls, evaluation of new and existing regulations, and foreign trade. The information used to construct the indicator is collected through a questionnaire. Low (high) values suggest few (many) regulatory barriers.

# ANNEX 2: DATA RELEASES

## LAST THREE WEEKS' NEWS AND DATA RELEASES (03 – 21 March 2025)

### **Real Economy**

- 04/03/2025: S&P Global released PMI for February 2025.
- 04/03/2025: ELSTAT released Labour Force Survey (monthly estimates) for January 2025.
- 04/03/2025: ELSTAT released Monthly Turnover Indices for Motor Trade (of the quarterly period) for 2024:Q4.
- 04/03/2025: ELSTAT released Monthly Turnover Indices in the Services Sector (of the quarterly period) for 2024:Q4.
- 04/03/2025: ELSTAT released Monthly Turnover Indices in Wholesale Trade (of the quarterly period) for 2024:Q4.
- 06/03/2025: The draft bill on support of the agricultural sector, interprofessional organizations in the same sector, the restart of the agricultural economy, and various organizational matters of the Ministry of Agricultural Development, after its adoption by Parliament on 4 March, is published in the Government Gazette of 6 March as Law 5184. In section 41, it includes provisions submitted to Parliament by the Ministry of Labor on 26 February which reduce (employees' and employers') social security contributions on overtime pay and on pay for night-time work and work during holidays.
- 07/03/2025: ELSTAT releasesd Labour Force Survey for 2024:Q4.
- 07/03/2025: ELSTAT released Quarterly National Accounts (provisional data) for 2024:Q4 and Annual National Accounts (estimates) for 2024.
- 10/03/2025: ELSTAT released Industrial Production Index for January 2025.
- 10/03/2025: ELSTAT released Harmonised Index of Consumer Prices for February 2025.
- 13/03/2025: ELSTAT released Issuing of Motor Vehicle Licences for February 2025.
- 14/03/2025: ELSTAT released Index of Wages Cost for 2024:Q4.
- 14/03/2025: ELSTAT released Production Index in Construction for 2024:Q4.
- 14/03/2025: ELSTAT released Import Price Index in Industry for January 2025.
- 14/03/2025: ELSTAT released Evolution of Turnover of Enterprises for January 2025.
- 20/03/2025: ELSTAT released Turnover Index in Industry for January 2025.

### **External Sector**

• 10/03/2025: ELSTAT released merchandise trade for January 2025.

### Fiscal

- 07/03/2025: MoF, general government cash balance for January 2025.
- 18/03/2025: MoF, state budget execution for January-February 2025 (preliminary data).
- 19/03/2025: BoG, central government net borrowing requirements on a cash basis for January February 2025.

### **Monetary & Financial**

- 05/03/2025: ECB released data on MFI interest rate statistics in the euro area for January 2025.
- 07/03/2025: DBRS upgraded the sovereign rating by one notch to 'BBB', assigning a stable outlook. The decision reflects the agency's view that legacy risks on the banking sector and public finance have receded. Bank asset quality has improved significantly, with the non-performing loans ratio moving closer to the euro area average while fiscal performance has been strong, facilitating further declines in the public debt-to-GDP ratio.
- 13/03/2025: The Greek PDMA tapped the bond market, with two syndicated bond re-openings, of existing 15- and 30-year GGBs. The amounts of the re-openings were €2 and €1 bn, respectively, and bids amounted to €35 and €21.5 bn, respectively. The re-offer yields were priced at 4.057% (coupon

rate at 4.375%) for the 15-year GGB and 4.408% (coupon rate at 4.125%) for the 30-year GGB. The transaction included a switch option for bond holders of the 0% Feb 2026 and the 1.875% Jul 2026 GGBs.

- 13/03/2025: DBRS upgraded the (long-term) deposit ratings of NBG and Eurobank to 'BBB' from 'BBB (low)' previously, changing the outlook to stable from positive. The rating decision came on the back of a similar one-notch upgrade to 'BBB' for the Greek sovereign a few days earlier.
- 14/03/2025: Moody's upgraded the Greek sovereign by one notch to investment grade ('Baa3', equivalent to 'BBB-'), with a stable outlook. According to the agency, the upgrade reflects the sovereign's greater resilience to expected future shocks due to continued improvements in fiscal performance and the health of the banking sector.
- 17/03/2025: Moody's upgraded the (long-term) deposit ratings of NBG and Eurobank to 'Baa1' ('BBB+' equivalent) from 'Baa2' ('BBB' equivalent), changing the outlook to stable from positive. The upgrade follows the agency's decision a few days earlier to bring the sovereign to investment grade (i.e. 'Baa3'). It also reflects the agency's view that both banks have been benefiting from continued improvement in capital adequacy, asset quality and profitability metrics amid a favourable macroeconomic environment. Moody's also raised the (long-term) deposit ratings of Attica Bank by two notches to 'Ba2' ('BB' equivalent), maintaining a positive outlook, reflecting the bank's improved bank fundamentals.
- 18/03/2025: Moody's upgraded the (long-term) deposit ratings of Piraeus Bank and Alpha Bank to 'Baa2' ('BBB' equivalent) from 'Baa3' ('BBB-' equivalent), changing the outlook to stable for the former and maintaining a positive outlook for the latter. According to the agency, both banks have benefited from an improvement in underlying financial fundamentals, reflecting better asset quality feeding into capital metrics and a favourable funding and liquidity profile.

### NEXT THREE WEEKS' NEWS AND DATA RELEASES (24 March – 11 April 2025)

### **Real Economy**

- 20/03/2025: BoG releases Indices of Residential Property Prices for 2024:Q4.
